MUNICIPAL HOSE CART CONFIGURATIONS

Reel Dividers

Do you need to wrap more than one type of hose? The hose reel dividers will allow you to do just that. The dividers can either be welded directly to the main reel or Hydro offers clamp on dividers that can be removed.

Hydraulics

These units are hydraulically driven and don't require a large engine to run. The municipality hose reels come with a mobile power pack that powers the hydraulics and can either be mounted directly to the unit or even placed in a truck bed.

Accessories

The municipal hose carts have accessory options that can be added depending on the type of operation you have. Some of these options include: toolboxes, DOT lighting & much more.

Removable A-Frames

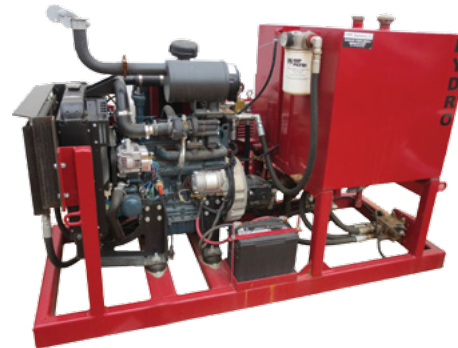

If you need different reels for different jobs but don't want to change your trailer, the removable a-frame option is what you're looking for.

This option allows you to run your a-frame reel with a mobile power pack, tractor, or any other power unit.

Manual Hose Reels

Don't need a large hose cart? There's variations of manual crank or hydraulically driven a-frame units that can fit into a truck and be easily moved with a forklift.

Hydro's mobile power packs gives you the capability to easily power your hose carts hydraulic system. These units can be attached directly to the hose carts trailer or can come detached and be placed anywhere that you need power.

** Not all options and variations of hose carts are listed in this brochure. Contact Hydro Engineering for more information.*
